Development of an Innovative Separation Process
for the Recovery of Aggregates Containing
Strategic Materials for the European Industry

CUP ST: 27716.29122023.042000334

CUP CIPE: D87H24003410009

The ARTU' project aims to develop an innovative separation process for the recovery of aggregates containing strategic materials for European industry, such as lithium and rare earths, generated both during the processing stages for the production of raw materials for the ceramic industry and during industrial production phases.
